

Web Interaction & Animation Project PDF

Daniel Plummer

4/30/2015

The idea of my site is a fictional web design company named DP Designs, which are my initials. I found the color scheme on adobe Kulers website.

1. Two jQuery effects - My first effect is a fade in effect of the jumbotron on the homepage. The file for that is called pageLoad.js

My second effect is on the about page. It is the toggle effect when you click on the contact us button a simple form slides up and down. That file is name effect.js

2. Bar chart – My interactive bar chart is on the about page. It shows some fictional numbers about percentages of businesses with websites. The file for that is named chart.js
3. Interactive image gallery - is on the media page. The images used in the gallery are picture from my computer that I took.
4. HTML5 video tag – This is also on the media page and the video is mine of me snowboarding.
5. Canvas – The two canvas tags are on the homepage and one is a picture of a simple logo I made in illustrator. The other is a facebook and twitter logo used from font awesome.
